PROFESSIONAL EXPERIENCE

Manhattan Associates

Atlanta, GA

Senior Software Engineer

Feb 2022 – Present

- Delivered end-to-end software solutions for major clients including Lululemon, Boeing, Disney, and HEB, translating stakeholder requirements into production features that generated \$250K+ in annual revenue.
- Designed and built an automated pre-deployment service that validates API handler-to-service mappings, catching configuration mismatches before build packaging, eliminating manual review and preventing deployment failures, saving 100+ hours annually.
- Built custom UI components, backend enhancements, and error-handling logic that improved product reliability and user experience across client-facing applications by 26%.
- Oversaw an offshore engineering team of 8 to deliver scalable production code for directly owned client accounts, ensuring technical quality and meeting project deadlines.
- Owned SDLC workflows by migrating code between environments, managing 21 GitHub repositories, preparing deployment artifacts via Jenkins, and delivering 120+ production releases on Linux servers, reducing code conflicts and deployment failures.
- Led production incident response as on-call engineer, analyzing logs to rapidly diagnose system failures and implement critical fixes during peak seasons, maintaining system uptime and resolving 21+ production incidents to minimize client-facing disruptions.
- Mentored 4 junior backend developers on internal systems and engineering best practices, documenting processes to improve onboarding.
- Optimized high-volume database performance by analyzing and optimizing queries, triggers, and stored procedures to resolve bottlenecks impacting critical transactional workloads, reducing query execution times to 3–12ms.

PROJECTS

Portfolio - <https://amulya-bathula-portfolio.vercel.app>

Deployment Validation Tool - Internal Platform Feature

- Identified a critical operational bottleneck where offshore deployment errors caused production incidents; designed a UI-based error validation tool to safeguard build pipelines that defined user requirements and led execution of real-time data validation workflows.
- Provided engineering teams with instant feedback loops to streamline releases, saving time by eliminating manual troubleshooting.

Somari - <https://somari.vercel.app>

- Designed, built, and shipped a full-stack recipe generation MVP (React, Spring Boot, OpenAI API), owning product lifecycle execution from initial concept to deployment.
- Conducted qualitative testing with alpha users on community channels; synthesized feedback to identify a 40% friction bottleneck in manual ingredient entry and a discovery gap regarding core matching features.
- Restructured prompt-engineering guardrails to force cohesive, complete culinary meals over literal ingredient combinations, and reprioritized the product backlog to introduce a bulk-paste onboarding flow.

Smart Price - <http://smartprice-api.eba-cxirmwkd.us-east-1.elasticbeanstalk.com/swagger-ui/index.html>

- Engineered a real-time pricing platform leveraging Spring Boot, AWS SQS, and MySQL to dynamically recalibrate product prices based on market activity.
- Built a comprehensive audit mechanism capturing historical price movements and variation percentages to ensure transparency and compliance in pricing logic.

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, SQL
- **Backend & Architecture:** REST APIs, Microservices, Event-driven systems
- **Cloud & Infrastructure:** AWS (SQS, RDS)
- **Frameworks & Libraries:** Spring Boot, React, Velocity, Freemarker Script, Figma
- **Web Technologies:** HTML, CSS, JavaScript, Swagger
- **DevOps & Tools:** Git, Jenkins (CI/CD), Jira, Postman, MarkMagic
- **Monitoring & Logging:** Prometheus, Kibana, Grafana, Pinpoint

EDUCATION

University Of Georgia

Bachelor of Science, Computer Science

Athens, GA

December 2021
