SUMMARY

Software engineer and team lead transitioning into product management, with over 4 years of experience leading feature development for internal company tools. Spearheaded the development of a deployment validation tool and a code-sync tool that saved engineers 100+ hours a year and improved their day-to-day productivity. Also built Somari, a side-project recipe app that simplifies daily cooking and grocery planning. Eager to bring my expertise in product innovation and user engagement to a dynamic, growth-oriented company.

PROFESSIONAL EXPERIENCE

Manhattan Associates

Atlanta, GA

Senior Software Engineer

Feb 2022 – Present

- Led technical execution and delivery of custom features for major enterprise clients (Lululemon, Boeing, Disney), translating stakeholder operational needs into scalable solutions that generated \$250K+ in annual revenue.
- Partnered cross-functionally with PMs to translate product goals into prioritized technical roadmaps and release plans.
- Owned release workflows across 21 code repositories, coordinating 120+ deployment artifacts to eliminate release conflicts.
- Oversaw an offshore engineering team to deliver production code for strategic client accounts, managing project timelines, tracking milestones, and ensuring technical feature quality.
- Managed SLA compliance and incident response during peak traffic seasons; analyzed system metrics to prioritize critical technical fixes, maintain application uptime, and minimize client-facing disruptions.
- Mentored 4 junior developers on system design and engineering processes; created technical product documentation to scale team onboarding and internal knowledge share.

PROJECTS

Deployment Validation Tool - Internal Platform Feature

- Identified a critical operational bottleneck where offshore deployment errors caused production incidents; designed and executed a UI-based error validation tool to safeguard build pipelines.
- Defined user requirements and led execution of real-time data validation workflows using Python, providing distributed engineering teams with instant feedback loops to streamline releases.
- Formulated and launched automation tracking mechanisms via Git and CI/CD pipelines, directly saving over 100 engineering hours annually by eliminating manual troubleshooting.

Somari - <https://somari.vercel.app>

- Designed, built, and shipped a full-stack recipe generation MVP (React, Spring Boot, OpenAI API), owning product lifecycle execution from initial concept to deployment.
- Conducted qualitative testing with alpha users on community channels; synthesized feedback to identify a 40% friction bottleneck in manual ingredient entry and a discovery gap regarding core matching features.
- Restructured prompt-engineering guardrails to force cohesive, complete culinary meals over literal ingredient combinations, and reprioritized the product backlog to introduce a bulk-paste onboarding flow.

Portfolio - <https://amulya-bathula-portfolio.vercel.app>

Smart Price - <http://smartprice-api.eba-cxirmwkd.us-east-1.elasticbeanstalk.com/swagger-ui/index.html>

- Product managed the technical execution of an event-driven, real-time dynamic pricing engine; defined technical requirements using AWS SQS and MySQL to adapt to market fluctuations.
- Defined compliance and tracking mechanisms by launching an internal audit system to capture price movements, ensuring data transparency and logic accuracy.

TECHNICAL SKILLS

- **Product & Platform Management:** Jira, Product Requirement Scoping, Technical Roadmapping, Agile/Scrum
- **Cloud & Infrastructure:** AWS (SQS, RDS), REST APIs, Microservices, Event-driven systems, CI/CD (Jenkins)
- **Development Frameworks:** Spring Boot, React, Velocity, Freemarker Script, HTML, CSS, JavaScript, Swagger, Figma
- **Core Languages:** Java, Python, SQL

EDUCATION

University Of Georgia

Bachelor of Science, Computer Science

Athens, GA

December 2021
